INDUSTRY MAINTENANCE TOOLS

Experts & To

ools

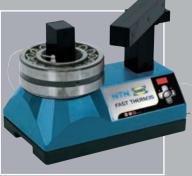

www.ntn-snr.com

With You

"You provide a complete solution of tools and services for your bearings, suited to your application, size and resources"

Experts & Tools

NTN-SNR Expert & Tools, at the service of our customers

Because expectations for the maintenance and mounting of bearings are specific to each customer, Experts & Tools offers you solutions that take into account your application and its importance to you as an available resource.

Each application requires special expertise. Maintaining a wind turbine is different to maintaining a printing press or a meat mincer. With the theoretical and practical experience we have accumulated over almost a century of dealing with industrial applications, NTN-SNR can provide you with the expertise and tools you need.

The scale and difficulty of your mounting and maintenance tasks determine our recommendations. We provide a customised response in terms of tools and organisation, suited to your situation.

▶ The NTN-SNR Group, with more than 21,000 employees worldwide, produces and improves maintenance tools and methods on a daily basis. Our aim is to bring you products and procedures that are safe and easy for your staff to use. The design of our tools is aimed at increasing your efficiency.

By reducing the amount of time it takes for mounting, dismounting as well as maintenance operations, and by maximising the working life of your bearings, our tools provide you with real savings and safety in use and will not damage the machinery they are being used on.

This catalogue contains the entire range of NTN-SNR maintenance tools. Our range of greases, greasers and centralised lubrication systems is contained in a separate catalogue.

And if you decide to sub-contract your maintenance operations?

The Experts & Tools teams can take care of this, based on agreed availability targets for your machinery.

Experts & Tools offers you a range of services that can be customised to meet your specific requirements:

- Theoretical and practical training for your employees.
- Expertise on your damaged bearings (on site or in our laboratories).
- **Supervision** of the dismounting or mounting of your critical bearings. Of particular interest for larger bearings where we can supply appropriate tools, including handling tools.
- **Rental** of maintenance tools: bearing heaters, hydraulic nuts and pumps, etc.
- **Diagnosis** of your lubrication installations or an analysis of your needs, with the production and installation of appropriate standard or customised equipment.
- **Renovation** of bearings removed from equipment as part of a preventive maintenance programme.

MAIN CAUSES OF FAILURES OF YOUR BEARINGS

The monitoring of the millions of NTN-SNR bearings sold has allowed us to establish very precise statistics on the origin of faults. This collection of data highlights one essential fact: it is rare that the bearing itself is the cause of a premature failure.

In 90% of cases, the causes can be found in external components which can be classified into four categories:

INAPPROPRIATE LUBRICATION (55%)

Inappropriate or incorrect lubrication significantly reduces the service life of the bearing.

It is often neglected because of bearing accessibility problems and a lack of knowledge about lubricants on the part of the user.

The choice of lubricant, the method, the quantity to apply to the bearing (neither too much nor too little) and the monitoring frequency must be properly studied.

NTN-SNR offers you a special service and markets a complete range of greases covering all applications, as well as an automatic greasing system.

INCORRECT MOUNTING (17%)

The mounting of a bearing on a machine is a key stage in determining the length of its life. A bearing that is not mounted correctly can deteriorate very quickly.

The main causes are:

- Insufficient or poorly adapted methods and resources,
- Contamination during mounting,
- The use of force during mounting,
- Poor preparation of the receiving components: shafts and housings outside tolerance, poor access for the lubricant, misalignment.

Abnormal noise levels can be a warning sign of deterioration. In the short term this causes fatigue of the bearing surfaces. NTN-SNR can provide you with mounting and dismounting services or tools and equipment to make these operations easier and more secure.

POLLUTION (18%)

The environment in which bearings operate is often highly polluted. Dust, liquid detergents, and other contaminants can severely reduce the working life of a bearing.

To deal with these problems, NTN-SNR has developed a comprehensive range of sealing systems and will be pleased to advise you on the best choice for your application.

FATIGUE (10%)

Bearings are key components and are subject to fatigue. Even more so since they rarely operate in ideal conditions (overloaded machine, insufficient lubrication, etc.)

The stresses that active surfaces of bearings are subjected to create surface pitting damage sooner or later.

Our monitoring methods and support from our experts will enable you to act on the first indication of failure and organise appropriate maintenance operations.

MOUNTING & REMOVAL COLD

GOOD PRACTICES FOR COLD MOUNTING

Cold mounting is the simplest method and is suitable for small and medium-sized bearings, completed with the normal adjustments.

OUR RECOMMENDATIONS:

The most frequently observed problems:

- Over- or under-tightening when adjusting.
- Excessive impacts during mounting or forces causing rings and seals to break, or races to become indented.
- The accidental introduction of particles or liquids present in the mounting environment.
- ▶ The bearing must be tightened on the rotating element to which it is fitted. See table below.

	Analysis of rota	tion (% Incidence)	Retention method
	Fixed housing and load (95%)	Rotating housing and load (0.5%)	
Fixed load with respect to the outer ring		O	Inner ring tightened on shaft
	Rotating inner ring	Stationary inner ring	
	Stationary shaft and load (3%)	Rotating shaft and load (1.5%)	
Fixed load with respect to the inner ring			Outer ring tight in housing
	Rotating outer ring	Fixed outer ring	

OUR RECOMMENDATIONS TO BE FOLLOWED:

- Check bearing identifying marks against drawings, specifications and procedures.
- Check that bearing seat dimensions and the accuracy of their shape and position correspond to NTN-SNR drawings and specifications.
- Prepare all equipment, tools and parts required before commencing assembly.
- Carefully clean and check all parts and devices in the bearing's environment.
- Remove the bearing from its packaging at the last moment in a completely clean working area.
- Never wash it, except in specified exceptional cases. The bearing is protected from oxidation by a light film of oil compatible with all lubricants.
- . Mount the bearing, using the chosen method.
- Lubricate, using a special bearing grease, following the instructions given.
- After mounting and before final start-up, check its operation, so as to detect any possible anomalies (noise, vibrations, temperature, abnormal play, etc.).

IN PRACTICE:

The sleeve is mounted by means of impact rings applied against the bearing ring which has the tightest fit. This avoids stressing the rotating body and damaging the bearing.

In the case of a long shaft for mounting requiring longitudinal adjustment of the bearing, we prefer using a mechanical sleeve with tapered contact surface associated with ng with tapered bore.

WHAT THE NTN-SNR EXPERTS HAVE TO SAY:

For easier mounting and to avoid contact corrosion of the shaft or the housing, always use an anti-fretting paste. This thick lubricant helps preserve the quality of parts surfaces subjected to sliding forces. Without this compound, corrosion would progressively cause the fit between bearing and shaft (or housing) to deteriorate, ultimately leading to vibrations and even the premature deterioration of the bearing and its mounting surfaces.

The anti-fretting paste also avoids introducing any pollutant during assembly (metal chips, liquid, etc.)

8

COLD MOUNTING TOOL KIT CASE

The NTN-SNR tool kit enables the quick, accurate and safe mounting of bearings.

Socket for the mounting sleeve

Impact ring

The use of a suitable socket, associated with the mounting sleeve, enables to install the bearing to the desired adjustment. The simultaneous support of the outer and inner rings prevents the risk of deterioration of the races and rotating assemblies. The kit can also be used for assembling other components such as sealing rings, pinions and pulleys.

ADVANTAGES

Of light and strong construction for workshop use, this toolbox contains:

33 impact rings:

- Very robust for a long working life.
- In impact-resistant, synthetic material, avoiding any metal-to-metal contact.
- Ideal for use in conjunction with a press.
- Calibrated for approximately 400 different bearings:
- with bore diameters between 10 and 50 mm
- and with outside diameters between 26 and 110 mm
- Clearly and permanently identified to aid selection.

3 mounting sleeves:

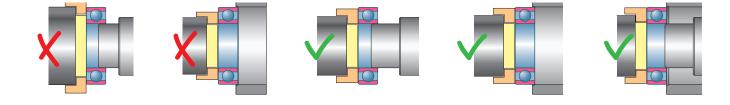

- Light and extremely robust, made of aluminium.
- With a good grip for the hand.
- 1 special dead blow mallet, ensuring optimum impact force is applied.

ANTI-FRETTING PASTE

The NTN-SNR anti-fretting paste is specially designed to prevent contact rust between 2 metal surfaces.

36

ITN

APPLICATIONS

• Contact corrosion, also known as fretting corrosion, appears in assemblies subjected to vibration or very slight slippage or oscillation. It can lead to the serious deterioration of bearings and other machine components and thus make dismounting very difficult.

ADVANTAGES

- Allows slippage for assemblies with play (wheel bearings, vibrating screens, etc.).
- Preserves the quality of the surfaces and the adjustment of mechanical assemblies by preventing contact (fretting) corrosion.
- Facilitates the mounting and dismounting of bearings and components such as nuts, bolts, pins, flanges, couplings, fluted shafts, etc.
- Water and washing resistant.
- Temperature range for use -40°C to +150°C.

COMMERCIAL REFERENCES

LUB ANTI FRETTING PASTE / T 60G LUB ANTI FRETTING PASTE / B 750G

ADJUSTABLE SPANNERS

10 spanners for tightening and loosening up to 30 differently sized nuts!

36

) APPLICATIONS

 NTN-SNR adjustable spanners enable the safe and effortless tightening and loosening of all KM, KML and KMK type nuts and also B, TB, BR and TBR precision nuts. They avoid any damage to the nuts or the shaft.

ADVANTAGES

- Made of special tempered steel, these spanners are extremely strong.
- The joint with its spring washer guarantees gentle reliable operation.
- The laser-etched imprint makes them easily and permanently identifiable.
- The hole in the handle makes them easy to store.
- They are adaptable to cover nut diameters from 15 to 180 mm.

Available in two versions:

With pins for nuts with holes

With hook for slotted nuts

MOUNTING & REMOVAL HOT

GOOD PRACTICES FOR HOT MOUNTING

Hot mounting makes it possible, by raising the bearing's temperature, to expand the inner ring so that it can be fitted over the shaft with ease.

- In the event of tight fitting on the outer ring, prior to the insertion of the bearing, the housing may be made to expand through heating.
- Conversely, a shaft can also be cooled using liquefied gas in order to facilitate its insertion into the inner ring of the bearing.

NTN-SNR's induction heaters provide the best solution in terms of safety, cleanliness and speed compared with oil-bath heating, hot plates or ovens.

Heating using a blowtorch is to be prohibited: it generates localised temperatures that alter the hardness of the bearing and therefore shorten its service life.

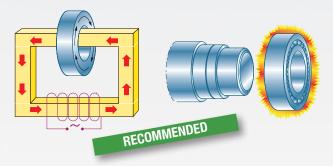

PRINCIPLE OF HEATING BY INDUCTION

The device comprises of a laminated steel core surrounded by a coil with multiple windings. When a current passes through it, this primary coil generates a magnetic field which itself induces an electric current in the bearing (or other steel part), substituted for the secondary coil of an electrical transformer.

When a high-intensity, low-voltage AC current passes through it, the bearing heats up quickly; while non-metallic parts and the device itself remain cool.

Induction heating magnetises the bearing. It is therefore necessary for the heater to demagnetise it at the end of the heating cycle. This avoids steel particles being attracted into the bearing later on.

WHAT THE NTN-SNR EXPERTS HAVE TO SAY:

The temperature should not be too high so as not to modify the characteristics of the steel (maximum 130° C) or of the internal components of the bearing. On the other hand, the temperature must be high enough to generate sufficient expansion for the easy installation of the bearing through temporarily loosening the fit.

The heating temperature is a function of the ambient temperature, on the one hand and the fit of the seat on the other.

The mounting of a bearing onto a shaft or into a housing requires a certain skill for proper alignment. The use of anti- fretting paste facilitates insertion and protects the shaft or housing from contact corrosion.

The wearing of heat insulating gloves is essential for the safe and comfortable handling of the heated parts.

In the case of heavy bearings, help will be required for their handling (use of a textile sling and mobile hoist or even an overhead crane).

THE RIGHT QUESTIONS TO ASK YOURSELF WHEN SELECTING A HEATING DEVICE

• How big are the parts to be heated? (Max. external diameter, max. width, min. and max. bore)

- . What are the min. and max. weights of the parts?
- What temperature has to be achieved?
- What electrical current and voltage are available in the workshop?

12

THE MAJOR ADVANTAGES OF THE FAST THERM AND SAFE THERM RANGE:

PRACTICAL AND SIMPLE IN USE

- · Robust design for use in an industrial environment.
- · Ready for immediate use.
- · Requires no maintenance.
- The ergonomic, pivoting yoke of the 35, 150 and 300 models facilitates the positioning of the parts to be heated.
- User-friendly; the touch-screen controls can be operated while wearing protective gloves:
 - Only three buttons are required to programme the portable version (two for setting the temperature (+40°C to +240°C), and one to start),
 - 2 additional buttons on the other versions also enable control of the "heating time" (0 to 99 min),
 - Display of the temperature and time and also error codes for quick troubleshooting.
- Audible signal at the end of the heating cycle.
- Choice of °C or °F temperature display.

HEATING CONTROL AND SAFETY

- Optimum control of the heating cycle by microprocessor and magnetic temperature probe.
- · Quick even heating of parts and no risk of over-heating.
- The equipment uses a default temperature of 110°C.
- Maximum heating temperature: +240°C.
- Automatic demagnetising at the end of the cycle.
- · Ability to control the heating time to achieve a steady temperature rise and avoid stressing the bearing (Safe Therm 700 and 1200).

The bearing's initial quality is maintained.

- Stop/start the device via an infrared remote control (Safe Therm 700 and 1200)
- . Only the part to be heated is subjected to an increase in temperature (easier handling, no risk of burning).
- Thermal insulation of the magnetic probe.
- · Meets EEC legislative standards.

Operator safety ensured.

ROBUST AND EFFICIENT

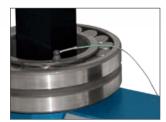

- · Robust industrial design, guaranteed for three years.
- Oil-, dust- and water-resistant control screen.
- Quick and economical with its TURBO-BOOST operating mode.
- In a horizontal position (placed on a polyamide base), the part heats twice as quickly
- . Efficient, it is no longer necessary to heat the same part several times to keep it at the desired temperature. As soon as the temperature drops 5°C, the machine automatically resumes the heating cycle. This resumption occurs over five consecutive cycles.

ENVIRONMENT-FRIENDLY

- No fumes or oil vapour.
- Excellent energy yield (approx. 80%), thus guaranteeing: - Savings in time and energy,
 - A longer life for the appliance.

Delivered as standard with a temperature probe, protective gloves and instruction manual.

FAST THERM PROBE (temperature probe)

MOUNTING & REMOVAL HOT

HEATING EQUIPMENT

ADVANTAGES

- Small, light heater: weighs only 17 kg.
- Easy to use, ideal for working on site.
- Designed for all bearings and rotating parts with a bore diameter above 10 mm with a maximum diameter of 280 mm and a maximum weight of 40 kg.

Delivered as standard with its 3 core bars, a pair of gloves and a probe in a sturdy carrying case.

COMMERCIAL REFERENCE TOOL FAST THERM 20 / Induction heater

FAST THERM 35

FAST THERM 20

Induction heater with pivoting arm, best-seller of maintenance or production workshops, which can heat a bearing of up to 70KG.

ADVANTAGES

- Used as fixed equipment.
- Compact, it weighs only 35 kg and can be easily moved using its two side handles.
- Multiple uses: apart from the temperature control mode, it also has, like all the larger models, a heating time control for large parts (shrink-on rings, pinions, pulleys, etc.).
- Ergonomic: the standard pivoting arm facilitates the loading of the parts to be heated.
- Designed for all bearings and rotating parts with a bore diameter above 20 mm with a maximum diameter of 410 mm and a maximum weight of 70 kg.

Delivered as standard with the core bar for bore diameters of 70 mm or more. Three other available yoke sizes are available as an option and may be ordered to suit the application.

COMMERCIAL REFERENCE

TOOL FAST THERM 35 / Induction heater

NTN, SNR

FAST THERM 150

Compact and economical induction heater, providing high heating power for bearings up to 150 kg.

ADVANTAGES

- Ergonomic: The standard pivoting arm facilitates the positioning of parts to be heated.
- Voltage/Current 400 V/20 A.
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 30 mm with a maximum outside diameter of **490 mm** and a maximum weight of **150kg**.

Delivered as standard with the core bar for bore diameters of 100 mm or greater. Five other available yoke sizes are available as an option and may be ordered to suit your particular application.

COMMERCIAL REFERENCE

TOOL FAST THERM 150 / Induction heater

FAST THERM 300

Mobile and powerful induction heater for bearings up to 300 kg.

) ADVANTAGES

- Ergonomic: thanks to its pivoting yoke the parts to be heated can be positioned easily.
- Fitted on a **trolley with a** yoke storage shelf, it can be moved quickly and safely around the various areas of the production floor.
- Voltage/Current 400 V/32 A.
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 30 mm with a maximum outside diameter of **740 mm** and a maximum weight of **300 kg**.

Delivered as standard with the core bar for bore diameters of 100 mm or greater. Five other available yoke sizes are available as an option and may be ordered to suit your particular application.

) COMMERCIAL REFERENCE

TOOL FAST THERM 300 / Induction heater

SAFE THERM 700

Sturdy and very powerful induction heater for very heavy parts up to 700 Kg for a bearing. Machine typically intended for heavy machine workshops (steel-making, paper, gear manufacturing, naval yards, etc.).

With You

ADVANTAGES

• Ergonomic:

- The core bars are positioned vertically and are equipped with a lifting ring,
- An optional core bar winch simplifies handling,
- The control screen is directable for operator comfort.
- Extremely robust: The design in steel with a glass-fibre coating makes the Safe Therm 700 particularly resistant to impacts and corrosion.
- Parts may be heated **horizontally or vertically**. In the vertical position, the parts rest on support rails (they are not suspended on the fixed core bar).
- Voltage/Current 400 V/63 A.
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 45 mm with a maximum outside diameter of **900 mm** and a maximum weight of **700 kg**.
- Ability to control the heating time to achieve a steady temperature rise and avoid stressing the bearing.
- The device can be started and stopped remotely by means of a remote control, **protecting the operator** from excessive exposure to the magnetic field.

Delivered as standard with the core bar for bore diameters of 145 mm or greater. Eight other available yoke sizes are available as an option and may be ordered to suit your particular application.

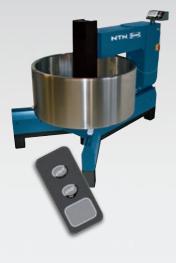

-) COMMERCIAL REFERENCE

MOUNTING & REMOVAL HOT

SAFE THERM 1200

Extremely powerful induction heater for parts weighing up to 1200 kg. Indispensable in machine shops in steelworks, paper mills and the rail and wind turbine sectors.

ADVANTAGES

- Ergonomic:
 - The core bars are positioned vertically and are equipped with a lifting handle,
 - A core bar winch is offered as an option,
 - The directable control screen provides added comfort for the operator.
- Extremely robust: made of steel with glass-fibre supports to be heated, particularly resistant to impacts and corrosion.
- Parts may be heated **horizontally or vertically**. In the vertical position, the parts rest on support rails (they are not suspended on the fixed horizontal core bar).
- Voltage/Current 400 V/100 A.
- Designed for all bearings and rotating parts in a horizontal position with a bore diameter over 85 mm with a maximum outside diameter of **1550 mm** and a maximum weight of **1200 kg**.
- Ability to control the heating time to achieve a steady temperature rise and avoid stressing the bearing.
- The device can be started and stopped remotely by means of a remote control, **protecting the operator** from excessive exposure to the magnetic field.

Delivered as standard with the core bar for bore diameters of 215 mm or greater. Three other available yoke sizes are available as an option and may be ordered to suit your particular application.

COMMERCIAL REFERENCE

TOOL SAFE THERM 1200 / Induction heater

A lifting device is offered for use with the Safe Therm 700 and 1200.

Delivered as an option with the device and is extremely useful in intensive applications and the handling of heavy core bars.

) COMMERCIAL REFERENCE

TOOL FT (Capacity) LIFTING DEVICE

Both the Safe Therm 700 and 1200 can be supplied in a mobile version.

SPECIAL PRODUCTS

ACCESSORIES

NTN-SNR is able to design machines, specially adapted to your application.

Thus, the dimensions and performance of our bearing heaters (Fast Therme 150 to Safe Therm 1200) can be modified to match precisely the **geometry** of your parts, your **production patterns** and to the **power supplies** of your workshops.

Customised equipment can also be developed for your large metal parts, such as for wind turbine and railway applications.

- We can provide you with a quotation based on the following information:
- The weight of the part to be heated (min/max).
- The dimensions of the part (min/max bore, max. outside diameter, max thickness).
- Electrical power and voltage available.
- Temperature to be achieved.
- Desired heating time or production pattern.

This device, especially developed for a wind turbine application, is capable of heating to 120°C in 60 minutes, parts weighing up to 10 tonnes with an outside diameter of 4 metres.

16

MOUNTING & REMOVAL MECHANICAL

GOOD PRACTICES FOR MECHANICAL DISMOUNTING

Take care when dismantling: look after your equipment and save time, while working safely.

Note, the dismounting of bearings is a delicate operation, both for the operator and for the mechanical items involved.

If mounting requires a lot of know-how, the risks involved in dismounting cannot be ignored, even if the bearing is to be scrapped.

By opting for the correct methods and tools, you reduce the risk of personal injury and damaging parts (shaft, housing, even the bearing, if it is to be re-used).

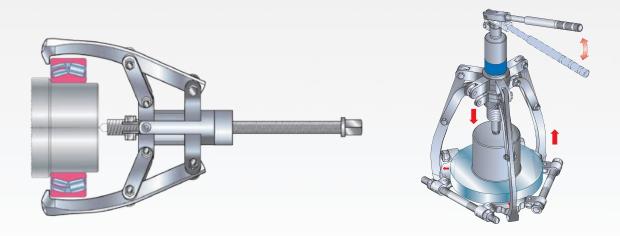

The two main principles for dismounting are mechanical and hydraulic.

OUR RECOMMENDATIONS FOR MECHANICAL DISMOUNTING

Whenever possible; apply the withdrawal force to the ring with the interference fit.

There are numerous types of extractor, depending on the grip offered by the bearing, its accessibility and the extraction force required.

Extractors equipped with a pump and hydraulic cylinder allow the operator to develop very high extraction efforts, using their own muscular strength. They are easy to use, due to the fact that their arms are self-centering.

THE PROPER QUESTIONS TO BE ASKED

- How do I grip the part? Selection of the type of grip: external, internal or special.
- What is the diameter of the part to be extracted? Enables the span, spread and force to be defined.
- How do I pull on the part?
 Choice of a support point: on the central shaft, on the outside of the part or using extraction accessories.

MOUNTING & REMOVAL MECHANICAL

BORE PULLER KITS

BP Set 5-44

BP Set 45-100

Slide hammer for BP Set 5-44

Puller kits for internal gripping of the bore. For quick and easy dismounting of bearings tightly mounted in a housing.

- Ideal selection of high-strength extractors with braces for extraction via the bore:
- Bearing whose outer ring is a tight fit in its housing.
- Outer rings or rings with well locked packing.

ADVANTAGES

Practical

- The BP Set 5-44 has a thrust bolt fitted with a handle facilitating the grip for the hand, as well as a slide hammer.
- Each kit contains several pullers that adapt to each of your applications.
- The case for small bearings combines an adjustable counter support and a slide hammer offering you the choice of extraction mode.

Reliable and safe

- The unique design of adjustable puller blocks enables successful and safe dismounting, without risk of jacking over and without forces.
- Each part is made of high quality steel, robust and resistant to impact, ensuring product longevity.

Flexible

- BP Set 5-44 includes 7 pullers for extractions of 5 to 44 mm bore diameters.
- BP Set 45-100 includes 3 pullers for extractions of 45 to 100 mm bore diameters.

DEEP-GROOVE BALL BEARINGS PULLER KIT

For quick and easy extraction of your deep-groove ball bearings housed in blind bearings.

BBPS 10-100

Bearings installed on shafts, Bearings with a tight fit on outer or inner rings.

APPLICATIONS

access, such as:

- Bearings housed in blind bearings,

ADVANTAGES Practical and easy

- The kit contains 3 O-rings to facilitate the assembly of your tool.
- The marking of parts along with the selection table included enables a quick selection of accessories to be used.

This puller kit is specially adapted to carry out, without dismantling your machine, extractions of bearings that are difficult to

• The visual user guide favours the correct implementation of the tool.

Reliable and safe

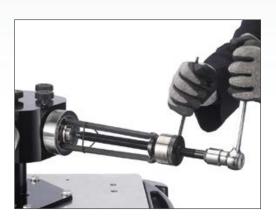

- The design of tools enables successful and safe dismounting, without risk of jacking over and without forces.
- Each component is made of high quality steel, robust and resistant to impact, ensuring product longevity.

Flexible

- The case includes 3 different sizes of shafts and 28 puller arms providing a very wide range of applications.
- The kit enables extraction of bearings of 10 to 100 mm bore diameter.

MOUNTING & REMOVAL MECHANICAL

A simple, robust and efficient range of pullers for an easy and safe dismounting of small or medium size bearings.

>43

APPLICATIONS

- Is also well suited to removing pulleys, toothed wheels, flywheels fixed to a shaft.
- **ADVANTAGES**

Practical

- The self-centering mechanism ensures the simultaneous positioning of the puller's arms on the bearing.
 - Compact and ergonomic, it may be easily operated in every position by one person.

Safe

- Self-locking system prevents the arms from bending or slipping.
- The greater the extraction force, the tighter the jaws grip the part.
- Robust, designed in hardened steel for maximum strength.

Multiple uses

- Quickly convertible to two or three claws, depending on the space available.
- Three available models for selection according to the outside diameter of the parts to be extracted and the required reach.

Maximum spread (mm)	Maximum span (mm)	Capacity (tons)
120	80	2
180	120	3
270	160	5

SCMP - 3 arms

www.alacam.com.tr

2/3 PRONGS SELF-CENTERING HYDRAULIC PULLER

SCHP 4T - 3 arms

SCHP 4T - 2 arms

A range of powerful tools for very easy and risk-free dismounting of large bearings and press fitted parts such as pulleys and toothed wheels.

) APPLICATIONS

The self-centering device facilitates positioning and anchoring around the bearing. The power developed by the hydraulic system allows the part to be extracted safely with very little effort.

) ADVANTAGES

Practical

- Ready-to-use in a strong case. No assembly of the jaws required before use.
- Compact: the hydraulic pump is built-in. No need for a separate pump, hose or spindle.
- Ergonomic: pump handle pivoting through 360°, allowing the extractor to be used in the most comfortable position. Telescopic, it provides optimum transmission of the effort.
- Easy centering of the piston on the shaft with retractable, integrated point.
- A piston extension is supplied for use with a remote support surface.
- A piston return device makes it ready immediately for further use.
- Long stroke of hydraulic spindle facilitates dismounting in one operation.

Multiple uses

- Possibility to change between two or three jaws, depending on the accessibility of the bearing.
- Available in three versions, depending on the power and size required: 4, 12, 20 and 30 tons.

Capacity (tonnes)	Maximum spread (mm)	Maximum span (mm)	Cylinder stroke (mm)
4	325	190	60
12	485	305	85
20	570	365	111
30	680	465	111

• For the 4 and 12-tonne capacity, an accessory kit consisting of a puller block, connecting rods and a set of bearings separators increases the number of uses and makes separation easier.

Safe

- A safety relief valve prevents any risk of overloading and limits the force applied to the maximum capacity of the equipment.
- A cover protects the user from possible flying bearing fragments. Made of transparent material, it provides good visibility for controlling the extraction.
- The 20 and 30 ton model is equipped with an innovative two-stage pump which makes operation easier and safer.

MOUNTING & REMOVAL MECHANICAL

ACCESSORY CASES FOR 4 AND 12-TON SCHP

ΔΔ

A strong grip for a safe and easy dismounting.

APPLICATIONS

A separator is a complementary tool to a claw extractor when the latter does not have sufficient grip. A perfect grip on the back of parts, using bevelled blades, reduces the force necessary for dismounting and avoids damaging the shaft's contact surface

ADVANTAGES

Ó

- Robust design ensuring a long life for the separation blades.
- After separation by tightening the two blades, turning the separator enables greater force to be used without deforming the blades for the complete extraction of the part.
- Extensions are included to compensate for the distance of the support face.
- Easy centering of the piston on the shaft with integrated point.
- Two versions are available depending on the required power: 4 and 12 tons.

COMMERCIAL REFERENCE

AS-SCHP 4T

UNIVERSAL, TRI-SECTION PULLING PLATE

A strong grip for safe and effective dismounting using a mechanical or hydraulic puller.

) APPLICATIONS

The tri-section pulling plate is the complementary tool to the three-armed pullers when the latter does not have sufficient grip. Universal, it is suitable for both the SCHP hydraulic extractor and the SCMP mechanical model.

ADVANTAGES

- The blades are placed behind the bearing, where the extraction force is most effective.
- The application of the effort on the inner ring minimises the risk of damaging the bearing while preserving the rolling body and the outer ring.
- The tri-section construction distributes the extraction force evenly, preventing the bearing from locking and/or tilting on the shaft during dismounting.

COMMERCIAL REFERENCE

- TOOL BP3S 26-160 / Tri-section back puller

- TOOL BP3S 140-495 / Tri-section back puller

MOUNTING & REMOVAL MECHANICAL

PULLER-SEPARATOR KIT

For easy and risk-free removal of rings or complete bearings mounted on a shaft and difficult to grasp.

Adjustable arms, provided in the kit, also enable extractions by internal or external gripping.

APPLICATIONS

- Allows the extraction of all parts mounted onto a shaft by force, such as pulleys, handwheels and pinions.
- In order to adapt to your various applications, the adjustable arms will also enable you to dismount:
 - Bearings or rings mounted on the shaft (external gripping),
 - Bearings or rings jammed in a housing (internal gripping).

ADVANTAGES

2-in-1 tool

- Each case contains a puller block that allows the mounting of the tool for separations as well as extractions.
- The removable arms will allow you to carry out extractions by internal or external gripping.
- A separator for your parts installed on the shaft, as well as a set of removable arms for internal or external gripping, all contained in a single case.

Powerful and reliable

- The separator is equipped with bevelled blades that ensure excellent grip and thereby avoid any locking.
- With a power of 100 kN, BPES guarantees safe extractions without any degradation to your environment.
- The separator as well as the puller are made of very high quality steel, ensuring the resistance and longevity of your kit. Practical
- Thanks to its unique design, BPES 10-105 covers a wide range of applications.
- The kit contains 2 extensions for applications requiring a long span.

COMMERCIAL REFERENCE

External grasping extraction

HYDRAULIC PULLER FOR MOUNTING AND DISMOUNTING

Practical and safe 3-in-1 tool, for mounting and dismounting of bearings and sleeves by internal or external grasping.

) APPLICATIONS

Ideal tool for mounting and dismounting a large variety of mounting parts, including bushings, bearings, wheels, gears and pulleys.

The kit, supplied in a steel case, includes:

- An internal gripping puller
- A double-acting hydraulic cylinder: 8 tons for thrust and 12 tons for extraction,
- 3 arms as well as 3 extensions.

ADVANTAGES

Quick and practical

- 3-in-1 tool for a reduced preparation time: same tool used for mounting and dismounting of bearings.
- The single double-acting cylinder ensures a thrust force of 8 tons as well as an extraction of 12 tons.
- Included extensions can be used to attain a greater range.

Longevity

• A built-in safety valve enables the tool to operate below rated pressure in order to preserve it over time.

Safety

- The built-in safety valve prevents all injuries to the user and all damage to the working environment.
- A self-centering design avoids risk of slipping of the arm during the extraction operation by internal gripping.

MOUNTING & REMOVAL HYDRAULIC

THE GOOD PRACTICES FOR HYDRAULIC **MOUNTING AND DISMOUNTING**

HYDRAULIC MOUNTING

The mounting of large bearings with tapered bores requires considerable effort that is difficult to produce by mechanical screw tightening. The use of hydraulic technology is required in such cases.

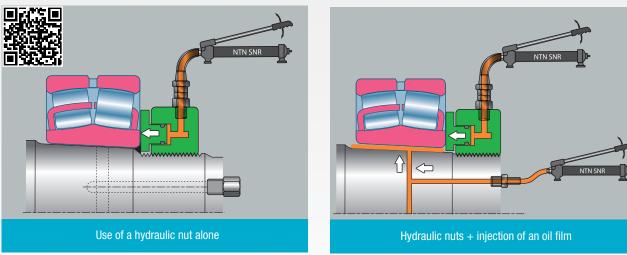

A preliminary solution consists in injecting a oil film over the entire contact area between the shaft and the inner ring.

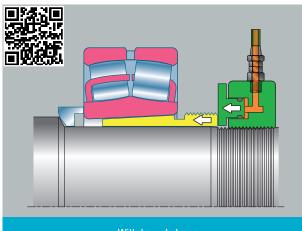

Another solution consists in using a hydraulic nut to develop the necessary mounting force.

The two principles may also be used simultaneously to make mounting easier. The residual clearance is checked using feeler gauges or a dial gauge is used to measure the displacement of the bearing along the tapered seat.

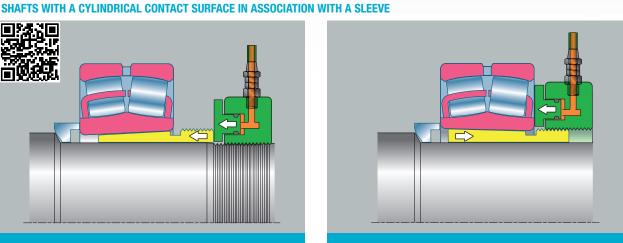

Two types of mounting lend themselves to this method:

TAPERED SEAT SHAFT

Withdrawal sleeve

Adapter sleeve

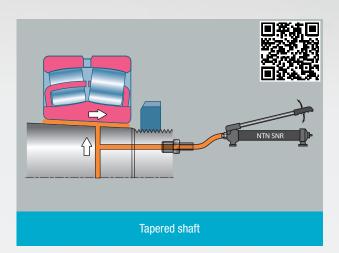

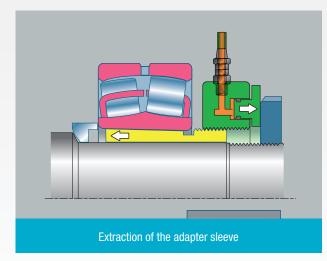

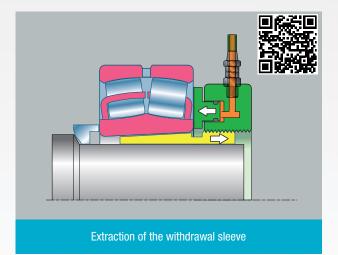

www.alacam.com.tr 26

HYDRAULIC DISMOUNTING

- > If an adapter or withdrawal sleeve was used during mounting, a hydraulic nut can be used for quick and effortless dismounting.
- If hydraulic channels were originally provided in the shaft, the injection of a film of oil on the contact surface between the shaft and the inner ring greatly reduces the effort required.

Extraction of the adapter sleeve with a hydraulic nut

Extraction of the withdrawal sleeve with a hydraulic nut.

MOUNTING & REMOVAL HYDRAULIC

HYDRAULIC NUTS

Precise, effortless mounting of your large bearings with a tool that is always ready for

) APPLICATIONS

use.

Beyond a certain shaft diameter, the mounting or dismounting of a bearing on tapered seatings requires hydraulic assistance.

A hydraulic nut ensures perfect control of the adjustment of the assembly while limiting the use of manual force and reducing the time taken for the operation.

ADVANTAGES

Besides the hydraulic principle, the "**back and forth**" design provides unique ease of operation with the automatic return of the thrust plate to its initial position (**design patented by NTN-SNR**)

"No need to retract the piston manually. This operation is often tedious and subject to oil leaks: the NTN-SNR nut is automatically ready for a new use."

- Wide range of sizes: for shafts from 50 mm to 1000 mm in diameter.
- Range also available in standard inch dimensions HMVC from 1,967 to 37,410 inches.
- Special sizes on request.
- Set of spare piston seals supplied as standard.
- The hydraulic nut is equipped with:
 - Two hydraulic connection points, with spot facing for perfect sealing,
 - One quick coupling connection (male) which can be positioned on the front face or on the outside diameter, depending on the ease of access.
 - (The 1500 bar high pressure provides maximum safety with a locking stop),
- One 1500 bar ball valve,
- 2 holes on the front face are provided for mounting the dial gauge (not included).
- The surface treatment of the nuts provides excellent protection against corrosion and ensures a long working life.
- Easier handling and nut screwing due to:
 - The knurling of the outer surface (all sizes),
 - A bar being supplied and the provision of 4 holes on the outer diameter. (For sizes \ge HMV 50 EBF).
- Easy handling with eye bolts for nut sizes HMV 60 EBF and upwards supplied.

MANUAL HYDRAULIC PUMP KITS

- 50

An ultralight high pressure 2-stage hand pump 700 bar (70 MPa) and 1500 bar (150 MPa).

APPLICATIONS

These high-pressure pumps are designed for use with automatic return hydraulic nuts or for the mounting and dismounting of bearings coated with an oil film.

Pumps are supplied as standard with the following accessories designed for use at 700 bar and 1500 bar:

- 1 pressure gauge, minimising the risk of overloading,
- 1 high-quality hose (1.5 m for the 700 bar pump with a 0.3 litre reservoir, 3m for the 700 and 1500 bar pumps with a 0.9 litre reservoir),
- 1 quick coupling connection (female) suitable for NTN-SNR hydraulic nuts,
- They are supplied filled with hydraulic oil.

ADVANTAGES

- Ultra-light, compact design.
- Robust reservoir in composite materials.
- Ergonomic: locking of the lever to facilitate transport
- Robust: pump guaranteed for life under normal conditions of use.
- Efficient: savings in time and effort due to the two stages which allow a reduction of 80% in the number of pump strokes required in comparison with single-stage pumps.
- User safety: electrically isolated lever and safety relief valve.
- Multiple uses: 3 available reservoir sizes:
 - 0.3 litre for nuts \leq HMV 54 EBF,
 - 0.9 litre for nuts \leq HMV 92 EBF,
 - 2.5 litres for nuts ≤ HMV 200 EBF (for 1500 bar pump).

Accessories included for 750 and 1500 bar pumps

- Pressure gauge adaptor for pumps 750b 0.3L and 0.9L.
- Pressure gauge (0-700 bar) or (0-1500 bar)
 - Liquid filled to protect against any sudden loss of pressure,
- Dual markings in bars / PSI,
- Fitted with a device protecting against bursting.
- Hose 700 and 1500 bar
 - Very strong thermoplastic, reinforced with layers of woven steel wire,
 - Polyurethane envelope for extreme abrasion resistance,
 - With a rubber protective "handle".
- Quick coupling protection (female) 1500 bars, which provides maximum safety with end stop locking and optimum sealing with a flat face valve.

Technical characteristics of the hydraulic oil

Contains corrosion inhibitors which do not attack sealing materials such as nitrile.

SAFETY INSTRUMENT

HEAT-RESISTANT GLOVES

Protective gloves to safely handle oily and hot parts of up to + 350° C

ADVANTAGES

- Made of KEVLAR, they are extremely resistant to tearing, abrasion and cuts.
- Non-inflammable: they provide a high level of protection against contact and convective heat.
- They are tested and certified for mechanical (EN 388) and thermal (EN407) hazards.
- Non-fluffy, they avoid polluting the bearings.
- Extremely comfortable, they are useful for all maintenance work.
- Single size: 10.5.

) COMMERCIAL REFERENCE TOOL GLOVE HEAT RESISTANT

MEASUREMENT INSTRUMENTS

SET OF CALIBRATED FEELER GAUGES

A simple and precise tool for measuring the clearance between two parts.

) APPLICATIONS

This feeler gauge set allows the quick, accurate measurement of radial clearance, especially on spherical roller and cylindrical bearings. It contains 17 gauges.

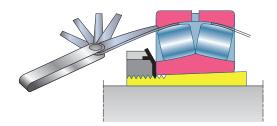

3 versions of the gauge set are offered: 100mm, 150mm and 300 mm long

) ADVANTAGES

- Set of 17 round end gauges.
- Delivered with a spare set of the thinnest gauge blades.
- Available in 100 mm, 150 mm and 300 mm.
- In a protective steel sleeve.
- Calibrated to 1/100th.

LASER TEMP 301 INFRA-RED THERMOMETER WITH LASER TARGETING

Enabling a preliminary diagnosis of the machine operation by means of accurate and safe measurement of the temperature remotely or by contact.

) APPLICATIONS

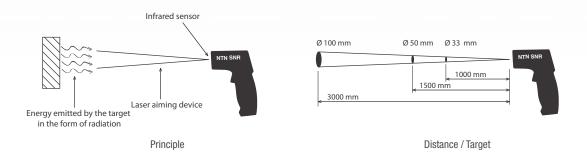

- The LASER TEMP 301 thermometer combines safety with accuracy.
- The safety of remote infrared measurement for burning, moving or difficult-to-access objects.
- Accurate measurement using the contact probe.
- Its elaborate optical system allows small, remote targets to be measured easily and precisely.

) ADVANTAGES

- Wide measurement range in infrared mode: -50°C to + 850°C.
- High degree of precision, using the:
 - Laser targeting device,
 - The excellent 30:1 distance:target ratio,
 - Emissivity adjustable between 0.1 and 1,
 - Type K thermocouple wire probe.
- Extremely quick measurements: response time less than 1 second.
- Internal memory able to record up to 20 measurements.
- Equipped with the following functions:
 - High / low, visual and audible adjustable alarms,
 - Automatic switch-off to maximise its useful life,
 - Maximum, minimum, difference, average measurement.
- Light, ergonomic gun shape.
- Simple to use, it may be easily configured to work in °C or °F.
- Back-lit display for easy reading.
- Supplied with:
- Type K thermocouple wire probe (range -50°C to +440°C, length 1 m),
- Protective pouch User manual.

INFRARED THERMOMETER WITH LASER	> P 33
Reference APPLIANCE CHARACTERISTICS	TOOL LASERTEMP 301 / IR Thermometer
Spectral response	8 -14 mm
Optics	D.S : 30:1 (50 mm to 1500 mm)
Response time	Less than one second
Temperature range	From -50 to +850°C
Accuracy*	From -50 to -20°C : \pm 5°C From -20 to +200°C : \pm 1.5% of the reading \pm 2°C From +200 to +538 °C : \pm 2% of the reading \pm 2°C From +538 to +850°C : \pm 3.5% of the reading \pm 5°C
Display resolution	0.1°C
Emissivity	Adjustable between 0.10 and 1.00 (pre-set at 0.95)
Screen indication :	Indication of level exceeded "-OI" for under-range "OI" for over-range
Laser aiming device	Wave length : 630-670 nm output lower than 1mW, class 2 (II)
Indication of positive or negative temperature	Automatic (no indication for a positive temperature) Sign (-) for a negative temperature
Screen	41/2 digits with backlit LCD screen
Auto switch-off:	After 7 seconds of inactivity High/Iow alarm
Thresholds	Flashing signal on screen and audible signal with adjustable thresholds
Supply	9 V alkaline battery
Battery life	38 hr (laser and backlight inactive) 15 hr (laser and backlight active)
Temperature for use	From 0 to +50°C
Storage temperature	From -20°C to +60°C
Relative humidity	From 10% to 90% RH in operation and less than 80% RH in storage
Dimensions	175 x 110 x 45 mm
Weight	230 g (including battery)
Memory	20 temperature values with unit of measurement (°C or °F)
* Accurate for an ambient temperature between 18 and 28°C (with relative hun	nidity below 80%)
CHARACTERISTICS OF THE THERMOCOUPLE PROBE K	From 40 to 40000
Temperature range	From -40 to +400°C
Display range	From -50 to +1370°C
Resolution	0.1°C
Accuracy	±1.5% of the reading ±3°C
Cable length	1 m
CC The devices meet the following standards 1992, electromagnetic emissions EN 50081-1: 1992, electromagnetic interference EN 50082-1: 1992, electromagnetic susceptibility

Set of 0-rings for hydraulic nut	TOOL HMV (Size) / Piston Seals	P 28	P 46
Hydraulic nut with metric thread and piston return device	Hydraulic Nut	P 28	P 46-49
Manual hydraulic pump kit	TOOL PUMP SET 700B-(reservoir capacity) L / Pump with accessories	P 29	P 50
Manual hydraulic pump kit	TOOL PUMP SET 1500B - 2.5 I / Pump with accessories	P 29	P 50
Oil for pump 700b and 1500b	TOOL HYDRAULIC OIL 1L	P 29	P 50
Pump pressure gauge, 700 bars	TOOL PUMP GAUGE 700	P 29	P 51
Quick coupling connection, ¼ gas (female)	TOOL PUMP COUPLING 1/4	P 29	P 51
Pressure gauge adapter depending on pump	TOOL gauge ADAPTER (Reservoir capacity)	P 29	P 51
High-pressure hose with quick coupling connector (female)	TOOL HYDRAULIC HOSE (Length mm) TOOL 1500b HYDRAULIC HOSE 3000	P 29	P 51
Quick coupling connection, ¼ gas (male)	TOOL HMV NIPPLE 1/4	P 29	P 51
Thermal insulation gloves	TOOL GLOVE HEAT RESISTANT	P 32	P 52
Set of feeler gauges	TOOL FEELER GAUGES (Length)	P 32	P 52
Infrared thermometer with laser sighting targeting ratio 30 : 1	TOOL LASERTEMP 301 / IR Thermometer	P 33	P 53

NOTES

•••

With our "field" experts, you boost the operational efficiency of

- By cutting your maintenance costs;
- By improving the quality of your work;
- By optimizing the service life of equipment.

The Bearing box proposes:

- Practical training
- Technical assistance
- Demonstration of maintenance product tools
